sease, performed surgery, dental work, and tea

During the last more than 75 years,
Liga has donated more than two million
dollars per year in equipment and
services to the underserved of Sinaloa.

But if we are to improve the health of
the people of Sinaloa, do we not have
the ethical burden of helping to prevent
disease in the first place through
access to clean food and water and
health education?

When we think of populations without clean water or sufficient food, we think of far away places.

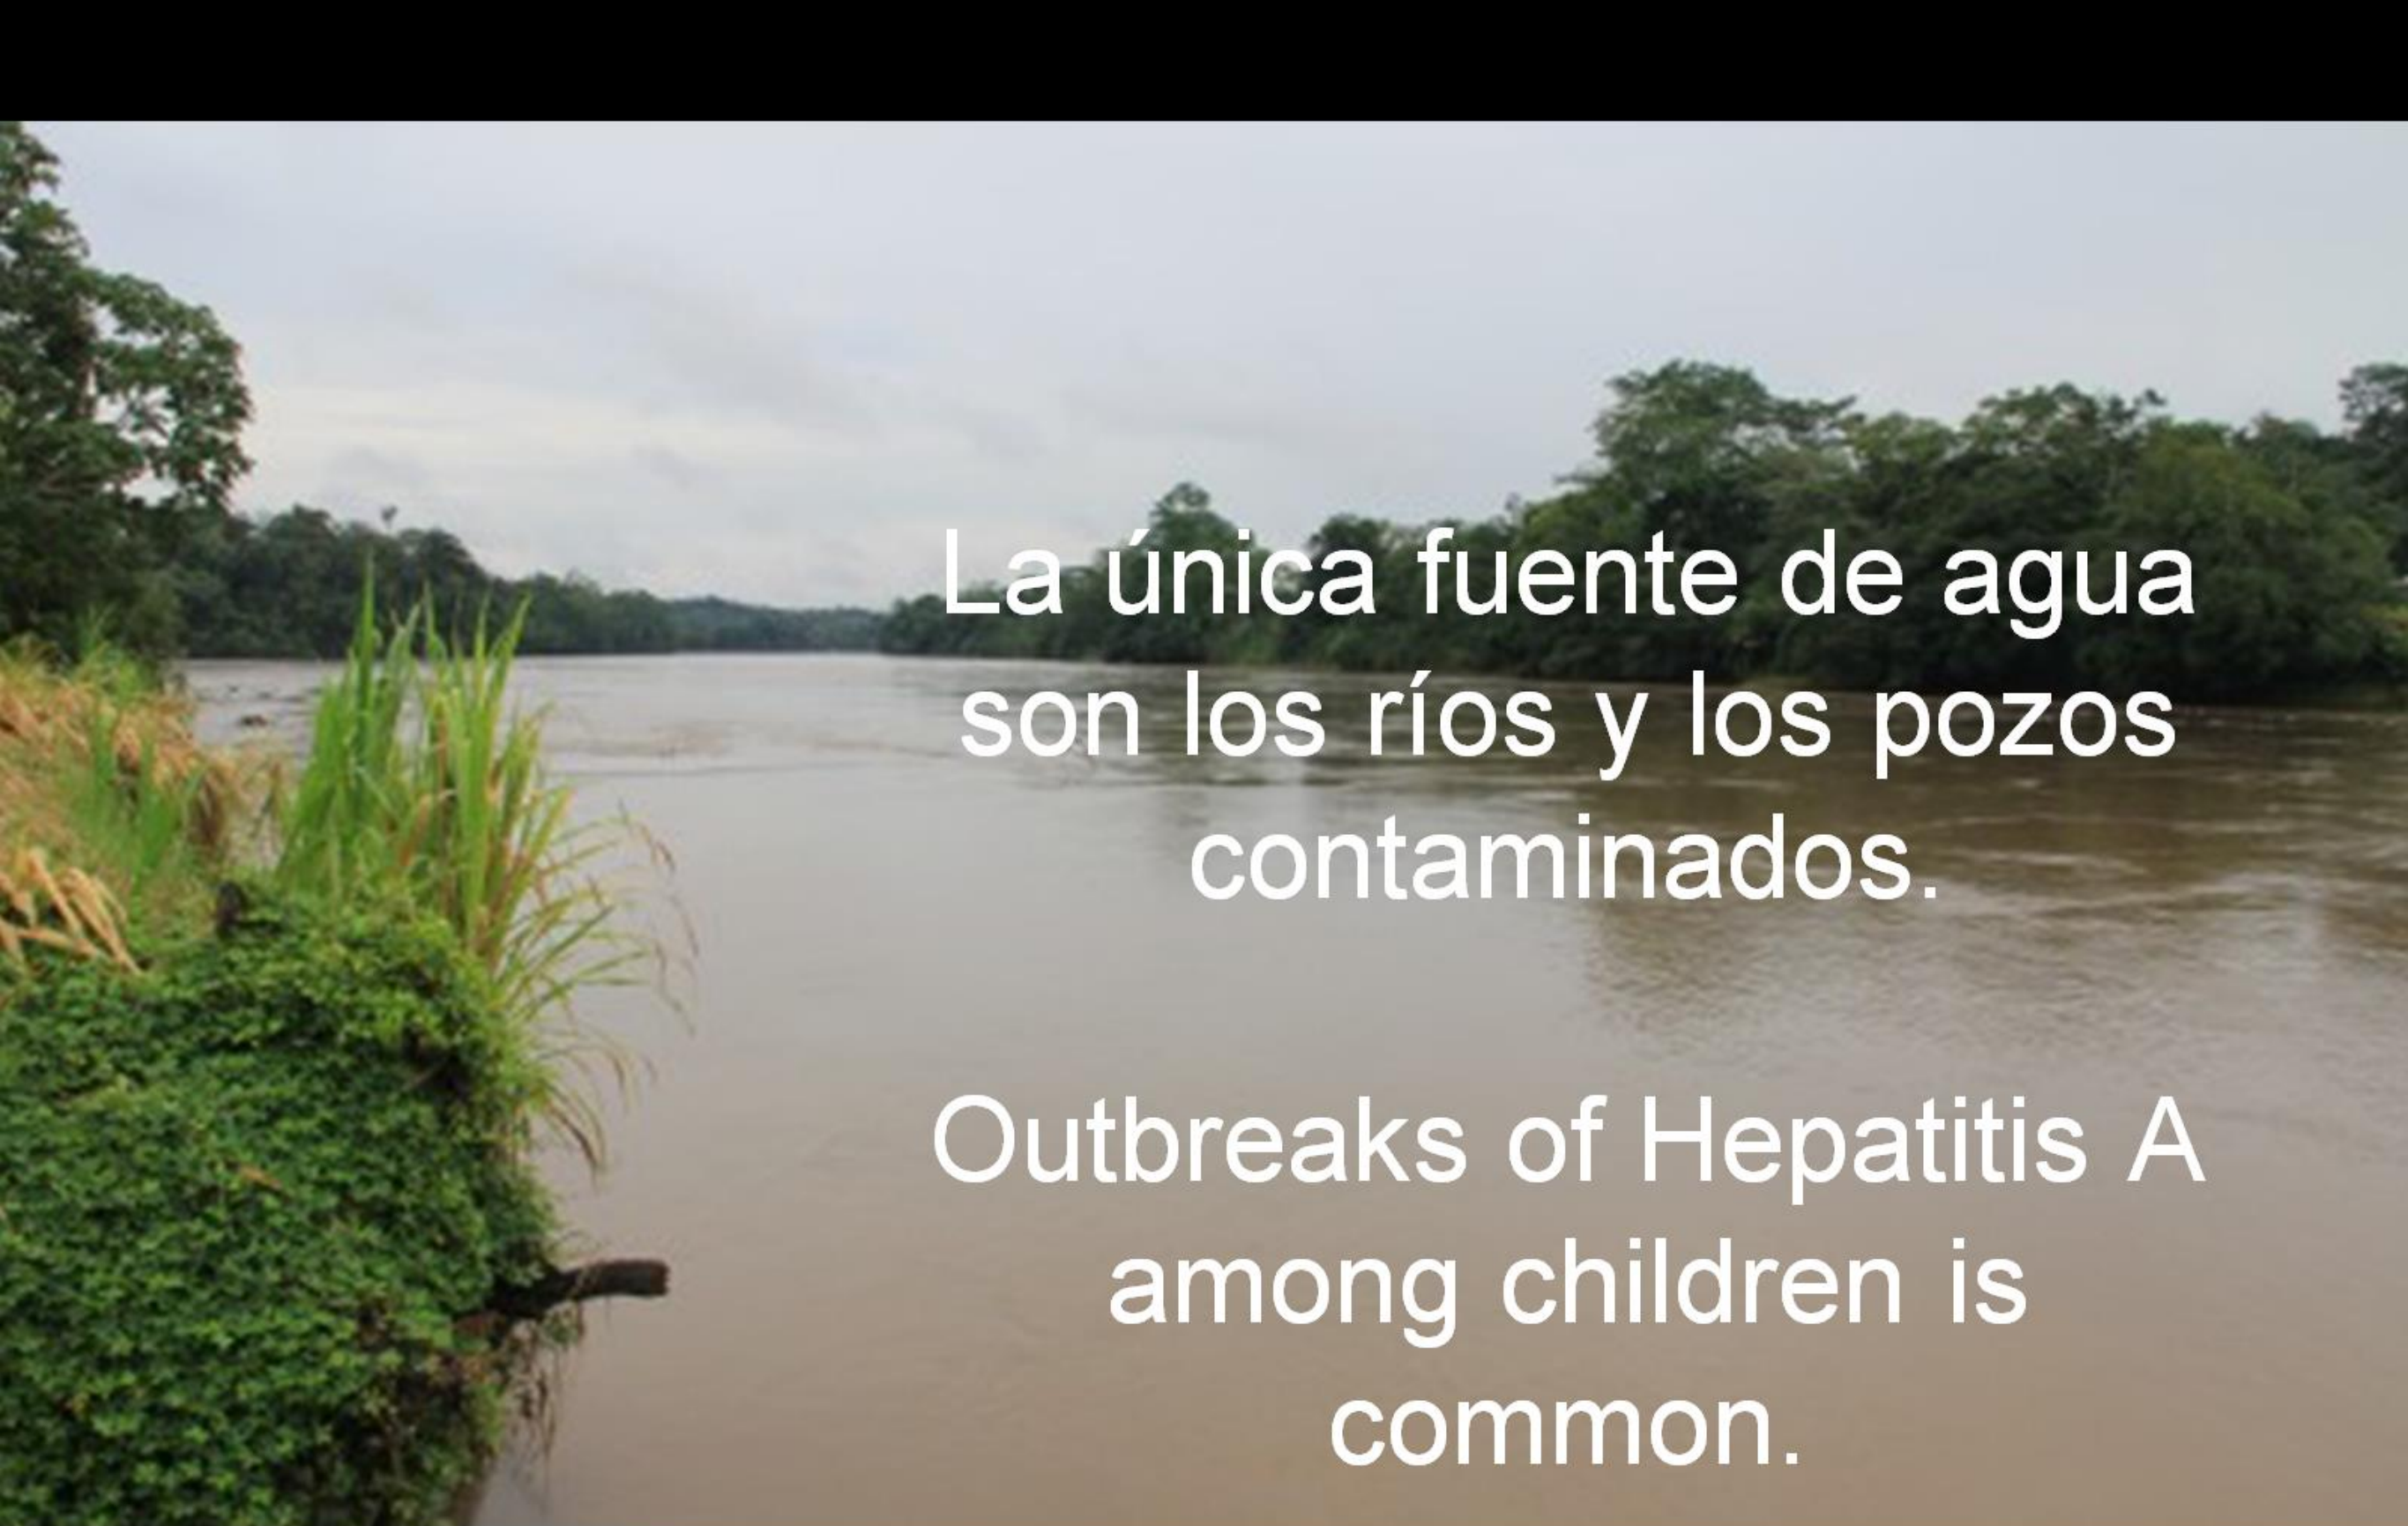

Right next door to the USA, however, there are populations who are forced to live without basic necessities.

They are the indigenous of Northern Sinaloa: The Mayo.

They drink water from the Rio Fuerte river which has high counts of parasites, eColi and other coliform acitvity. Their well water is contaminated with eColi, and pesticides.

La única fuente de agua
son los ríos y los pozos
contaminados.

Outbreaks of Hepatitis A
among children is
common.

Preocupa existencia de escuelas 'patito' aquí

La mayoría de las personas afectadas ...
son los pacíficos indígenas de los pueblos
mayo y yaqui. Ellos no tienen los recursos
para comprar agua embotellada.

The best solution to our needs are Biosand filters. We have tried various types of filters and find that the simple HydrAid filter serves our needs best.

These filters do not do well in exposed areas such as Africa, but under cover and protection they should last 25-30 years.

As of January 2017, 10 working filters have been installed in Los Capomos, Canutillo, Tehueco, and Barotén. Local people have been educated and are maintaining filters.

Pre- and post-tests have been completed and the filters are effective. Children previously ill with stomach disease now are healthy.

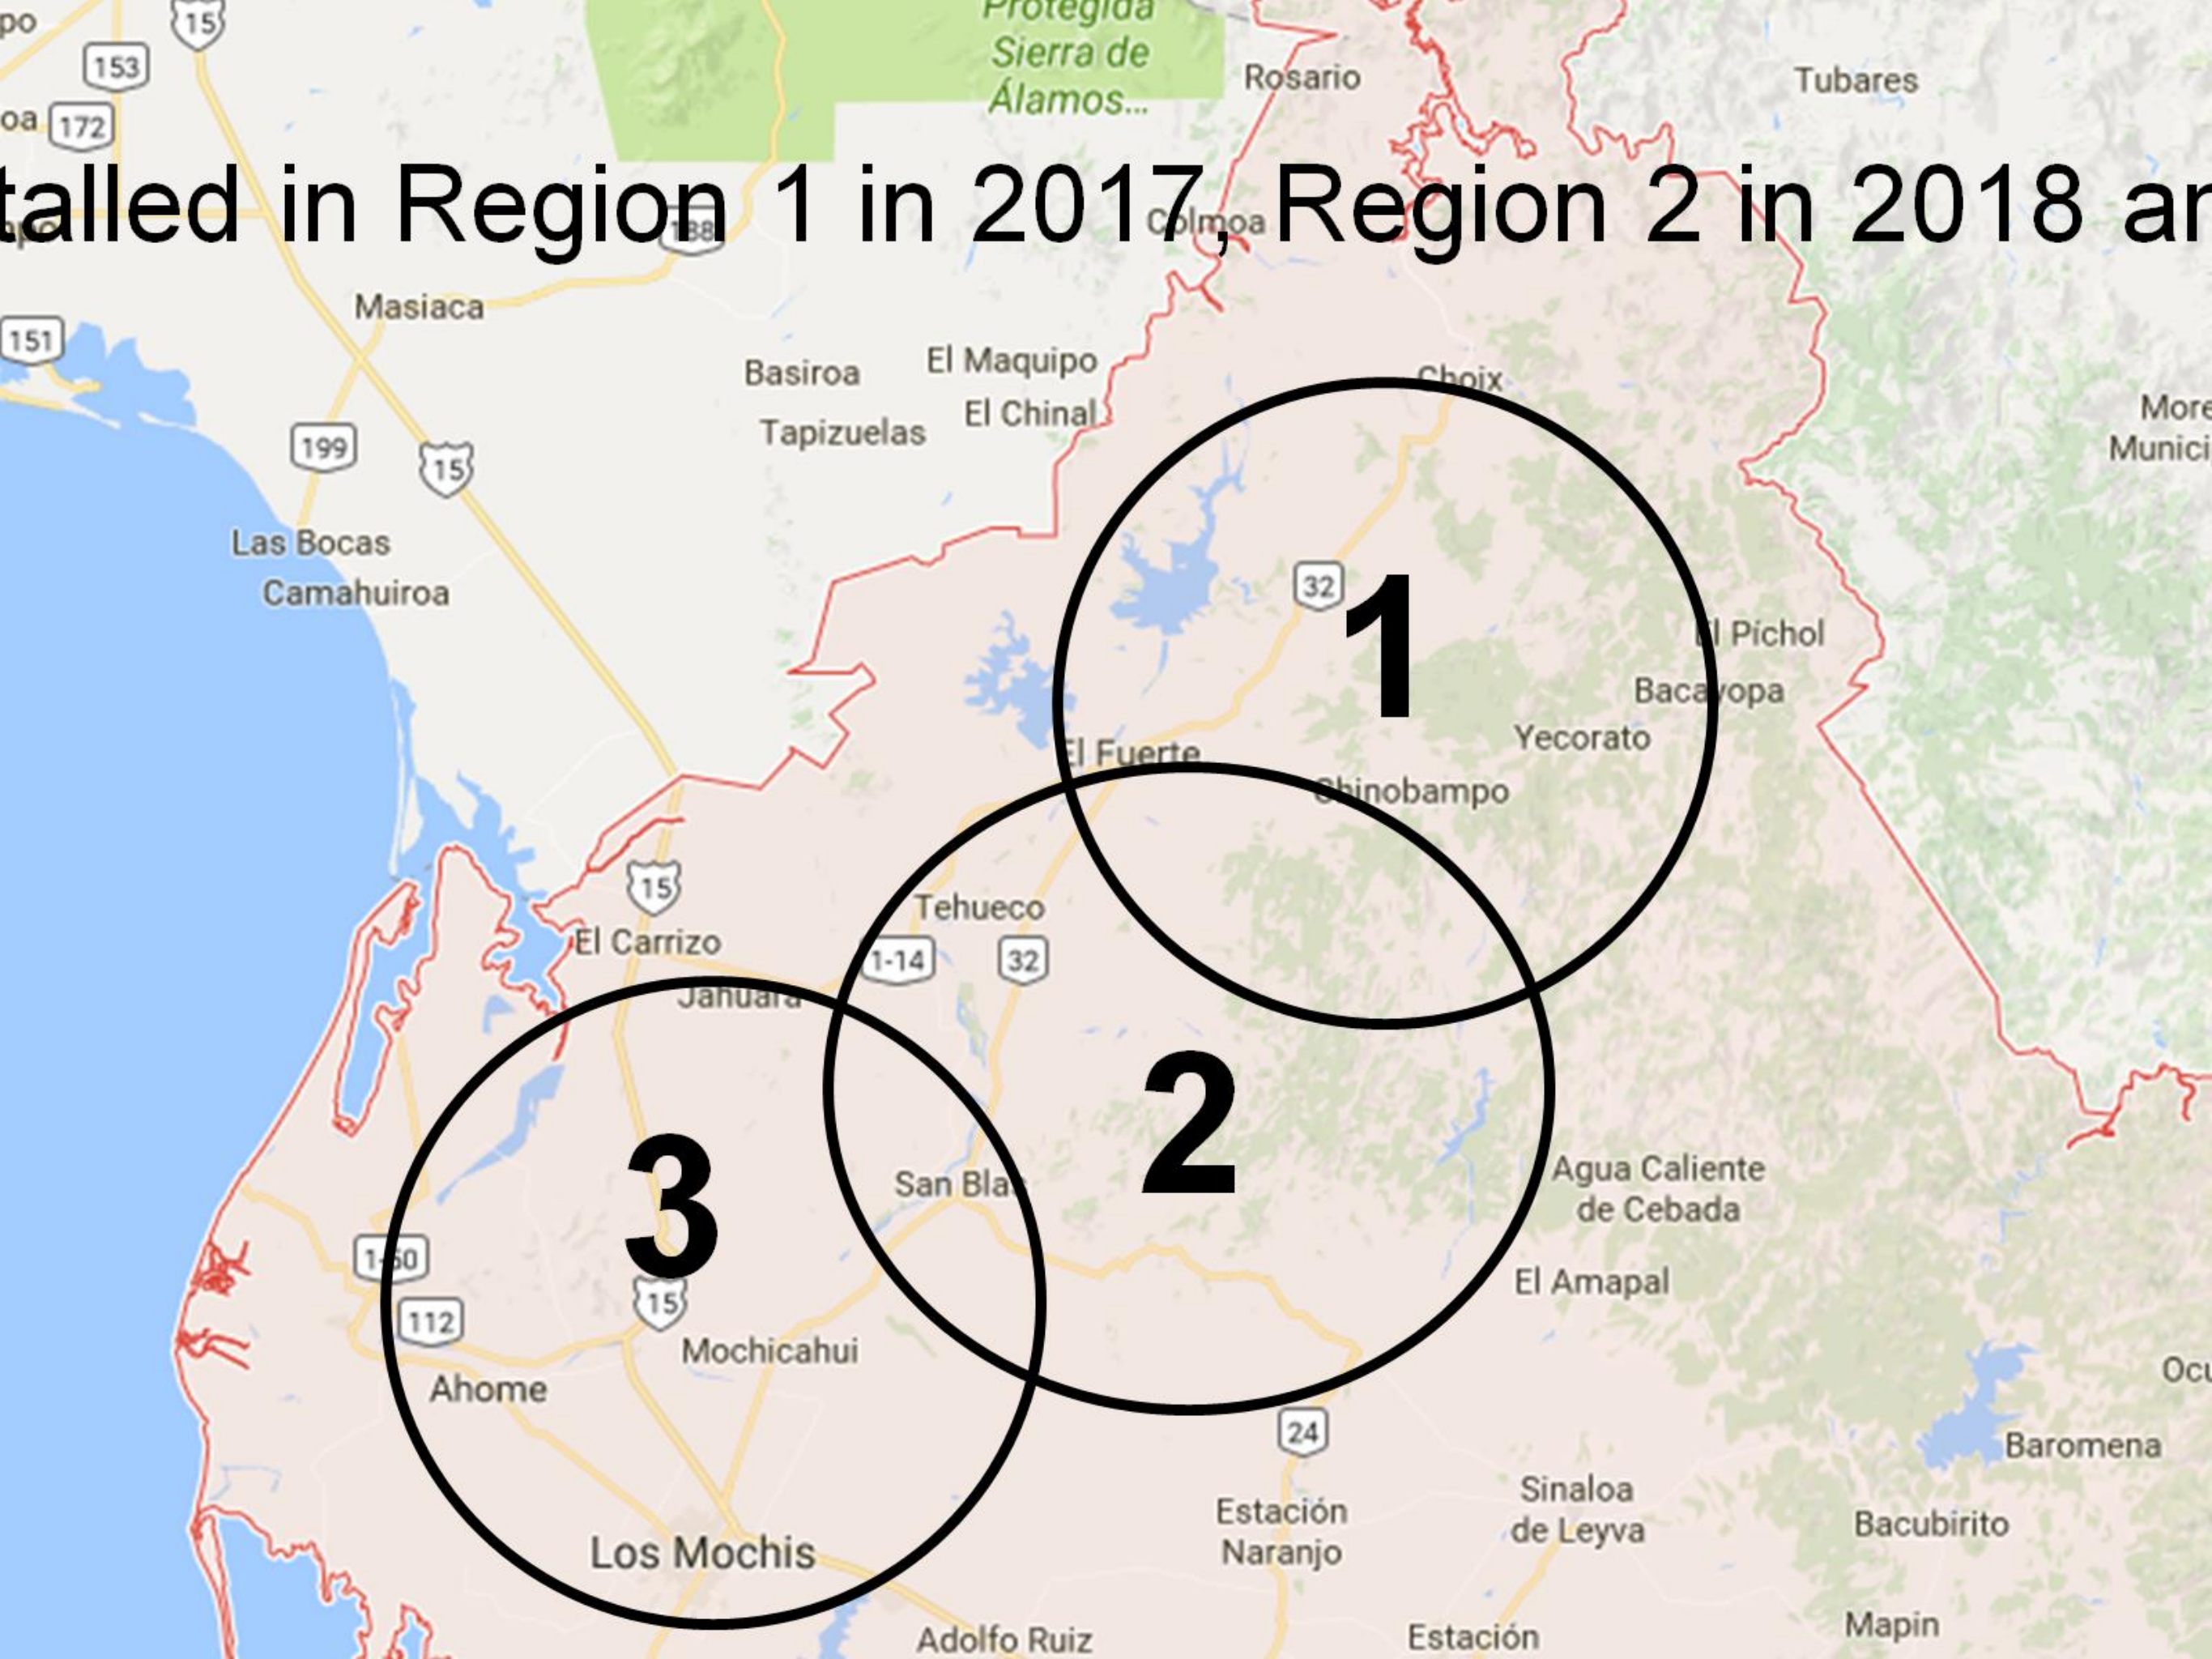

Un filtro biológico de arena dará a dos familias agua limpia por un máximo de 30 años.

Cada filtro cuesta sólo ... \$34 USD no incluye la construcción, la arena y las pruebas.

installed in Region 1 in 2017, Region 2 in 2018 and

So what is next and what is needed?

PHASE 1 (1,250 filters)

50 communities

25 filters per community including schools

\$33,250 Filters (bulk purchase)

\$8,250 Silica sand <.71mm and gravel

\$5,250 5 gallon water containers

\$46,750 Total Phase One*

** expenses of training, microbiology testing kits, stipends for locals, transportation and delivery not included and borne by private funding-raising*

The first filter was
installed en Baroten
in June 2016.

The first time
many families
have had
clean water.

10 filtros se instalaron en Sinaloa
